DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: In paragraph [0001] applicant should update the status of parent application S.N. 10/138,186.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-3, 6, 11, and 12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Williams (Fig. 1; col. 2, lines 2-18).
- 4. Claims 1, 3, 6, and 11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Fremd, Jr. (Fig. 1; page 1, col. 2, lines 7-21, 34-37, 43-47; page 2, col. 1, lines 5-14, 55-58).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 4, 7, 8, 10, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williams taken together with Brown '582.

Art Unit: 1724

Williams (Fig. 1; col. 2, lines 2-18) substantially disclose applicant's invention as recited by instant claims 4, 7, 8, 10, and 13, except for a specific recitation that the apparatus taught thereby includes a preheater for preheating the fuel prior to contact with the gas.

Brown '582 (Fig. 1; col. 3, lines 17-20) teaches such a well known preheater. It would have been obvious for an artisan at the time of the invention, to provide the Williams carburetor with a fuel preheater, in view of Brown, since such is well known within the art to improve the efficiency of the gas-liquid contact process, as a warmed liquid is more readily vaporized by a gas coming into contact therewith.

7. Claims 5 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williams taken together with Fremd, Jr.

Williams (Fig. 1; col. 2, lines 2-18) substantially disclose applicant's invention as recited by instant claims 5 and 14, except for the specific tube diameters as recited by applicant.

Fremd, Jr. teaches that it would have been obvious to modify the air tube diameters to meet the requirements of the contact process. In view of such a teaching by Fremd, Jr., it would have been obvious for an artisan at the time of the invention, to modify the air tube diameters of Williams to any desired diameter, including those as recited by instant claims 5 and 14, such dimensions being dictated by the desired air/fuel conditions, uses and circumstances (note page 1, col. 2, lines 43-47 and page 2, col. 1, lines 5-14 of Fremd, Jr.).

Art Unit: 1724

8. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Williams and Brown '582 as applied to claim 7 above, and further in view of Fremd, Jr.

The primary reference combination as applied to claim 7 above substantially discloses or suggests applicant's invention as recited by instant claim 9, except for the specific tube diameters as recited by applicant.

Fremd, Jr. teaches that it would have been obvious to modify the air tube diameters to meet the requirements of the contact process. In view of such a teaching by Fremd, Jr., it would have been obvious for an artisan at the time of the invention, to modify the air tube diameters of the primary reference combination to any desired diameter, including those as recited by instant claim 9, such dimensions being dictated by the desired air/fuel conditions, uses and circumstances (note page 1, col. 2, lines 43-47 and page 2, col. 1, lines 5-14 of Fremd, Jr.).

Conclusion

- 9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 10. This is a CIP of applicant's earlier Application No. 10/138,186. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1724

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott Bushey whose telephone number is 571 272-1153. The examiner can normally be reached on M-Th 6:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on 571 272-1166. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
